

America's Warrior Partnership Network Fact Sheet

Overview of the Network

The America's Warrior Partnership Network is a digital coordination center that links community organizations with resources, connections and expertise from across the nation to ensure they're empowered to provide needed services and support to local military, veterans and their families.

The Need Fulfilled by the Network

There is an abundance of resources provided by organizations across the country that assist veterans, but a lack of coordination between service providers has resulted in gaps that leave many veterans unable to receive assistance at the local level. When a veteran's need cannot be met locally, the Network enables community organizations to find a national service provider that will be able to assist.

Organizations that use the Network

Veteran-serving organizations, non-profits, government agencies and businesses that are interested in engaging veterans.

Technology Powering the Network

The Network is powered by WarriorServe[®], an IT system based on the Salesforce platform. The system enables shared data tracking and reporting to enhance case coordination, expand the reach of local community organizations and standardize the referral process between service providers.

History of the Network

America's Warrior Partnership, a national veteran-serving non-profit, created the Network in 2017. It is based on the non-profit's Community Integration Service Model and its four central tenets: Connect, Educate, Advocate and Collaborate. Using this framework, the Network is designed to facilitate the national collaboration necessary to empower communities to empower veterans.
